

Specialist Pest Control: Bed Bugs

A bed bug infestation has nothing to do with cleanliness, they invade the finest hotels and cleanest guest houses.

Bed Bugs are the same as Dust Mites and can be treated with a specialised deep-cleaning of mattresses, sofas, pillows and other soft furnishings. **RIGHT?**

WRONG!

Bed bugs are seasoned travelers that move effortlessly from offices and stores to gyms, hotels and into homes – hiding in luggage, personal belongings, furniture or clothing.

This, and the fact that they are nocturnal parasitic bugs that feed off blood, make them extremely difficult to control without the help of an experienced pest specialist.

Early Detection is Key

In a bed bug's lifetime, females can deposit one to five eggs a day, and may lay 200 to 500 eggs. They can live for more than 300 days.

Reduce your chances of a costly bed bug infestation by catching them early: Look for these signs in mattress seams, on sheets, on furniture, behind baseboards, electrical outlet plates and picture frames...

Seeing the bugs: Adult bed bugs are about the shape and size of an apple seed.

Case skins: As the juvenile bugs grow, they shed their skins, discovery of which can indicate their presence.

Blood spotting on bed linen from bites

Bites may also indicate bed bug activity, but further signs will need to be found, since other sources can cause red welts on the skin.

Defecation: After feeding, bed bugs return to their harborage to hide where they defecate black to brown stains on porous surfaces or black to brown mounds on nonporous surfaces.

Specialist Cleaning: Mattress & Upholstery

The hygiene, freshness and comfort of mattresses are consistently threatened by general dust, stains, odours, mould, bacteria and parasites like dust mites or bed bugs.

Why do manufacturers recommend cleaning your mattresses regularly?

We clean your mattresses in 5 easy steps

- 1** Vacuum to remove dry dust, dead skin and dust mite excrement
- 2** Treatment to kill viruses, bacteria, mould spores ,etc
- 3** Treat stains (including urine stains)
- 4** Deodorise and neutralise odour (including cigarette smoke)
- 5** Avoid over dampening the inner cushioning to prevent long drying times that can lead to odours, mould or mildew growth (the bed can be made within 20 minutes of the service being completed)
